

THE LOCK THAT SOUNDS THE ALARM

Mechanical security paired with a 100 dB loud alarm signal

A 10 mm strong locking bolt made of hardened special steel provides solid basic security for the 277 Alarm disc brake lock. The additional alarm function provides a 100 dB loud alarm sound in the event of an attack, which additionally protects your motorbike from attackers.

The "push down" cylinder enables very easy handling by automatically locking the bolt when closing. This avoids unnecessary handling.

We take care of your vehicle's safety so that you can do what is important to you.

Technologies

- 10 mm locking bolt
- The bolt, body and the structural parts of the locking mechanism are made of specially hardened steel
- Alarm function based on a vibration detection system
